The New ISO 8 Processing Suite

FDA registered and ISO 9001:2008 registered.

Jet Pulverizer Co. is expanding and enhancing its service offerings by building a new ISO 8 classified processing suite for micronizing Pharmaceuticals, Nutraceuticals and Foodstuffs.

The new suite is an ISO 8 (Class 100,000) classified area that features down draft ventilation, temperature & humidity controls, positive pressure airlocks, and isolated gowning room.

Resources include Type III DI water for washdown and cleaning equipment, desiccant & HEPA filtered compressed air, carbon filtered & molecular sieve compressed nitrogen, and high purity (99.998%) liquid nitrogen for low temperature milling.

Various processing services are available such as jet milling, hammer milling and screening at GMP level protocols. GMP level includes enhanced cleaning procedures, cleaning verification, and documentation for strict FDA requirements.

On site analytical lab provides fast and accurate particle size characterization and reporting. Equipment and methods include Horiba LA-950 & Coulter LS230 laser diffraction units, Coulter Multisizer, and sieves.

Jet Pulverizer Co. is ready for your R&D and production needs and can accept gram to metric ton processing requirements.
