**On the cover:** Modified Jet Pulverizer Micron-Master mill uses a new advanced jet-milling technology to reduce high-value and specialized compounds that are tough to grind. Mill focuses high-intensity energy from compressed liquid nitrogen into the grinding chamber to reduce plastics and polymers to an average particle size less than 30 microns. Mill provides superior and instant micronization with no attritional heat or contamination. Company provides test-grinding and other size reduction services at its toll processing facility. Dust collection equipment by MAC Equipment. Photo courtesy of LiquaJet LLC, Moorestown, N.J., 856-235-5554 ([www.liquajetllc.com](http://www.liquajetllc.com)).
